Part I

Demos

`extras_require_demos.pkginfo_subpackage`

This is an example of defining requirements in a `__pkginfo__.py` file.

It was created with the following code:

```
.. extras_require:: extra_b
   :__pkginfo__:
```

Attention: This module has the following additional requirements:

```
click<7.1.2
flask>=1.1.2
sphinx==3.0.3
```

These can be installed as follows:

```
$ python -m pip install extras-require-demos[extra_b]
```

Functions:

`function_b`(arg1[, arg2, arg3])

This function does something

function_b(arg1, arg2=0, arg3='abc')

This function does something

Parameters

- **arg1** (*any*) – An argument
- **arg2** (*int*) – An integer argument. Default 0.
- **arg3** (*str*) – A string argument. Default 'abc'.

`extras_require_demos.requirements_txt_subpackage`

This is an example of defining requirements in a `requirements.txt` file.

It was created with the following code:

```
.. extras_require:: extra_a
   :file: requirements_txt_subpackage/requirements.txt
```

Attention: This module has the following additional requirements:

```
numpy>=1.18.4
pandas!=1.0.0,>=0.25.0
scipy==1.4.1
```

These can be installed as follows:

```
$ python -m pip install extras-require-demos[extra_a]
```

Functions:

`function_a`(arg1[, arg2, arg3])

This function does something

function_a (arg1, arg2=0, arg3='abc')

This function does something

Parameters

- **arg1** (*any*) – An argument
- **arg2** (*int*) – An integer argument. Default 0.
- **arg3** (*str*) – A string argument. Default 'abc'.

`extras_require_demos.setup_cfg_subpackage`

This is an example of defining requirements in a `setup.cfg` file.

It was created with the following code:

```
.. extras_require:: extra_c
   :setup.cfg:
```

Attention: This module has the following additional requirements:

```
faker
pytest
tox
```

These can be installed as follows:

```
$ python -m pip install extras-require-demos[extra_c]
```

Functions:

`function_c`(arg1[, arg2, arg3])

This function does something

function_c (arg1, arg2=0, arg3='abc')

This function does something

Parameters

- **arg1** (*any*) – An argument
- **arg2** (*int*) – An integer argument. Default 0.
- **arg3** (*str*) – A string argument. Default 'abc'.

`extras_require_demos.manual_subpackage`

This is an example of defining requirements manually.

It was created with the following code:

```
.. extras_require:: extra_c

    pytz >=2019.1
```

Attention: This module has the following additional requirement:

```
pytz>=2019.1
```

This can be installed as follows:

```
$ python -m pip install extras-require-demos[extra_c]
```

Functions:

`function_d`(arg1[, arg2, arg3])

This function does something

function_d(arg1, arg2=0, arg3='abc')

This function does something

Parameters

- **arg1** (*any*) – An argument
- **arg2** (*int*) – An integer argument. Default 0.
- **arg3** (*str*) – A string argument. Default 'abc'.
